

FOR IMMEDIATE RELEASE

The VJ Electronix XQuik II Automatically Counts Components as Small as 01005 with Better Than 99 Percent Accuracy

July 2016 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection systems, will exhibit the award-winning XQuik II with AccuCount Technology in Booth # 1J45 at [NEPCON South China](#), scheduled to take place August 30- Sept. 1, 2016 at the Shenzhen Convention & Exhibition Center. The company also will demonstrate the improved Micra system and Summit II.

The popular Micra is designed for rework of smaller, high performance components, such as Chip Scale Packages (CSP), Package on Package (PoP) and Micro Passives (01005). The enhanced Micra provides a larger 35 mm alignment field of view, expanding its range of applications into more automotive, medical and military/aerospace products.

The revolutionary XQuik II with AccuCount Technology is helping manufacturers around the world keep accurate inventory of their component reels. The XQuik system automatically counts components as small as 01005 with better than 99 percent accuracy. The process takes only seconds, and requires no programming. The new XQuik II handles reels from 7 to 15".

The new Summit II is the latest semi-automated rework system. Improved ergonomics combined with next-generation controls and proven heating technology provide the greatest performance and flexibility. Summit II features a smaller footprint, yet larger board capacity with easy to adjust board support fixtures. Enhanced SierraMate software takes the popular user-friendly operation to the next level with a simple icon driven GUI and unmatched flexibility through easily customized operation sequences.
