FOR IMMEDIATE RELEASE

VJ Technologies' ECAT Wins a 2010 Innovation Award

April 2010 — VJ Technologies, Inc., the leader in Rework technologies and global provider of advanced X-ray inspection systems, announces that it has been awarded a 2010 EMAsia Innovation Award in the category of Repair/Rework Equipment for its Edge Connector Assembly Tool (ECAT) Reflow System. The award was presented to the company during an April 21, 2010 ceremony that took place at the Shanghai Everbright Convention & Exhibition Center during NEPCON China 2010.

VJ Technologies' ECAT automatic straddle mount reflow system is designed specifically to deliver precise, controlled heat to connector leads while protecting the connector body and PCB.

Proprietary SierraMate™ Windows®-based software provides an easy-to-use "1-2-3-Go" graphical user interface, featuring intuitive programming, automatic profiling and data collection for product traceability.

The ECAT is "production ready" for high-volume assembly of straddle mount connectors. Its high-efficiency convection heaters deliver energy to the connector's leads. The unique, quick response model allows precise profiles at maximum throughput, while avoiding the risk of surface damage to the PCB.

The ECAT incorporates unique features such as Advanced Auto Profile that, together with precision indexing and automated data/event logging, account for its continuous productivity.

Established in 2006, the EMAsia Innovation Awards program strives to recognize and celebrate excellence in the Asian electronics industry, inspiring companies to achieve the highest standards and push the industry forward.

###

About VJ Technologies

VJ Technologies, Inc. manufactures production ready Rework and X-ray inspection solutions with many advanced capabilities. The company also provides custom Rework and X-ray solutions tailored to satisfy specific application

VJ TECHNOLOGIES

requirements. VJ Technologies is a worldwide leader in custom industrial X-ray inspection solutions.
